**Developmental Trajectories of Early Communicational Skills as
Predictors of Later Language Difficulties**

Spring Seminar at Freie Universität Berlin
Department of Education Science and Psychology

Tuesday, 28th of May 2013, 5 pm, Freie Universität Berlin, Campus Dahlem,
“Seminarzentrum – Silberlaube”, Room L 116, Habelschwerdter Allee 45, 14195 Berlin

Short abstract: There is a strong evidence for the long-term consequences of delayed early language development, along with the notion that early intervention is likely to lead to better language outcomes in the at-risk children. In our studies we have tried to identify possible risk trajectories as early as possible and explore their connections to follow-up data.
